Certified Compression of Vision–Language–Action Models
AI & Quantum Community — Phase-1 Submission

Where to start

This folder is the Phase-1 submission. Two documents carry the work:

- **technical-report-v2.pdf** (8 pages). The technical report: method, measured results over 3 seeds, exact Lipschitz certificates, the refusing runtime guard, the full safety suite, honest limitations, and a claim-to-artifact provenance appendix.
- **concept-proposal.pdf** (3 pages). The concept proposal: problem framing, approach, feasibility, impact, validation plan, and team.

Short version first

Our website explains the concept visually, in plain language, and links the same documents:

- **Website:** <https://qicert.vercel.app>
- **Documentation:** <https://qicert.vercel.app/docs>

Supporting material

- **supplementary.pdf** (2 pages). Resource declaration (69 scored runs, 10.20 GPU-hours, full run-by-run ledger) and license inventory for all weights, datasets, and dependencies.
- **Code, artifacts, tests:** <https://github.com/ZakLr/qicert>
