

qicert Phase-1 Submission: Resource Declaration and Licenses

Zakaria Loughi, Achraf Boussahi, Mouadh Assal, Abir Chekroun, Hiba Menacer
AI & Quantum Community

September 2026

1 Resource declaration

Every claimed number must be traceable to a recorded run with its full resource cost. The tables in this section are that trace, regenerated from `results/ledger.csv` in the repository. Failed and aborted runs are excluded from all claims but kept in the ledger for provenance.

1.1 Machine

Host	Windows 11 workstation
CPU	AMD Ryzen (Family 25 Model 117), 8 cores
GPU (primary)	NVIDIA GeForce RTX 5060 Laptop, 8 GB
GPU (secondary)	NVIDIA Tesla T4 (Kaggle)

1.2 Scored runs (status = completed)

69 scored runs, total wall-clock **10.20 GPU-hours**. Per-run energy draws rounded to two decimals are below the 0.01 kWh reporting threshold for this hardware class; cumulative consumption is declared as under 0.20 kWh across the full campaign.

1.3 Failed / aborted runs (excluded from claims, kept for provenance)

17 failed runs, mostly import and API-compatibility errors during environment bring-up. Each is recorded in the ledger with its error. These consumed under 30 minutes of wall-clock time in total and contribute to no reported number.

2 License inventory

Backbone weights and their licenses, recorded at download time from the Hugging Face model cards (source of truth: `weights/_licenses.json` in the repository).

Repository	Kind	License	Downloaded
Stanford-ILIAD/minivla-libero90-prismatic	checkpoint	MIT	2026-08-25
Stanford-ILIAD/prism-qwen25-extra-dinosiglip-224px-0.5b	backbone	MIT	2026-08-25

Both components are MIT-licensed and permit research use, modification, and redistribution with attribution. Datasets (LIBERO) are MIT-licensed. Third-party Python dependencies and their licenses are listed in the repository (`environment.yml` and package metadata); all are permissive (MIT/BSD/Apache-2.0) except PyTorch (BSD-style) and Transformers (Apache-2.0), both of which permit this use.

3 Reproducibility

Code, ledger, run artifacts, and test suite: <https://github.com/ZakLr/qicert>. Website and documentation: <https://qicert.vercel.app>. Every number in the technical report maps to a run directory or ledger row (Appendix A of the report).
